

Data Engineer

Description

Job Description

As DATA Engineer within IT Production, you'll be helping the data tribe preparing and making data available in a safe and secure manner, for multiple purposes – reporting, analytics and/or applications. The goal is to perform the IT Prod related activities linked to the data activities.

Your main objectives are:

- To help designing and implementing the data model on the datalake
- To analyse the best “golden” sources of data and define the business and technical rules on how to integrate them
- To prototype the solution in order to support the business validation together with IT delivery data engineers
- Develop the “logical” and “physical” data models and data stores, and to industrialise the feeding and deliveries from the integrated data stores (datawarehouse, datamarts, data sets) together with IT Delivery and responsible to push it into production environment
- To streamline these data pipelines across the enterprise, for maximum usage throughout the company or business/function
- Operate & maintain the [ETL](#) environment & filetransfers
- Responsible for all changes in Pre-prod & prod

Qualifications

- You hold at least a Bachelor degree
- You are fluent in English

- You have at least 3 years of relevant experience in Data Analytics
- Python, Oracle, MS SQL, HDFS, Hive, DWH, ETL
- IBM Datastage, Informatica suite
- BI reporting tools, cloud
- Good analytical and synthesis skills

Additional Information

The working mode is hybrid (50% onsite).

How the process will look like

Your teammates will gather all requirements within our organization. Then, once priority has been discussed, you will decide as a team on the best solutions and architecture to meet these needs. In continuous increments and continuous communication between the team and stakeholders, you're part of making data play an even more important (and understood) part withing Brand New Day.
