

Manager, Data Engineering

Description

About the company:

DoubleVerify is a global leader in AI-powered digital campaign activation. Scibids empowers global brands to drive specific KPIs and tangible outcomes more effectively while improving operational efficiency and reducing manual lift. DoubleVerify technology does not rely on digital identifiers such as cookies and can be activated across leading Demand-Side Platforms such as The Trade Desk, DV360, and Xandr to mention a few. To learn more visit <https://doubleverify.com/scibids-ai/>

Recently, DoubleVerify closed its [acquisition](#) of Scibids providing an End-to-end, comprehensive measurement and granular optimization. DoubleVerify is the recognized market innovator with the technology and tools that accurately authenticate the quality of digital media and drive ad performance for the world's largest brands. DV provides media transparency and accountability to deliver the highest level of impression quality for maximum advertising performance. Since 2008, DV has helped hundreds of Fortune 500 companies gain the most from their media spend by delivering best-in-class solutions across the digital ecosystem that help build a better industry. About the role:

The mission of DoubleVerify is to provide media buyers with fully automated buying strategies for display campaigns, leading to uncompered performances for a minimum of human work.

The Data Engineering team is at the core of the DV product, and is responsible for communication between DV and its partners. All teams need correct and reliable data. We ingest diverse and volumetric data. The team also manages outbound communications with partners. We use partner api cross-referenced with a set of business rules to upload models generated by the scibids product.

As Manager, Data Engineering, your role will be to lead the data engineer team and participate in the development of the project.

You'll be responsible for writing OKRs and the Data Engineering roadmap, managing the day-to-day prioritization of tasks and sharing best practices with the team. You'll also study and challenge different ways of ensuring job scalability.

You will also take part in development work to improve the product. The scope of the data engineer varies between:

- ELT job creation (api dump, data formatting, insertion of big data)
- Creation of api and lib to help inter-team communications
- Contribute to the development of a reverse [ETL](#) for uploading DoubleVerify models
