

Junior Research Engineer (e-Xperience Associate)

Description

Job Description

What does this role involve

You will become part of the research-oriented project, aiming for open-source ML community contribution and ML conference publication. A hybrid work model guided by goals from the Research Proposal developed during the hiring process. The position is a 6-month, full-time contract with flexible working hours, aimed at those pursuing academic degrees like a master's, or beginning a PhD.

We are looking for people who:

- Have practical experience with Deep Learning and Big Data
- Have critical thinking skills and a theoretical understanding of ML
- Know the methodology of conducting scientific research
- Know Python and data visualization libraries at the advanced level
- Know common ML libraries (torch, transformers, pandas, numpy)
- Know English at B2+ level and can present results in verbal and written form

The following are also a plus:

- Experience with cloud platforms (GCP, AWS, or Azure)
- Hands-on experience with LLMs: prompt engineering, model evaluation

What we offer:

- A hybrid work model that you will agree on with your leader and the team. We have well-located office (with fully equipped kitchens and bicycle parking facilities) and excellent working tools (height-adjustable desks, interactive conference rooms)
- A wide selection of fringe benefits in a cafeteria plan – you choose what you like (e.g. medical, sports or lunch packages, insurance, purchase vouchers)
- English classes that we pay for related to the specific nature of your job
- The necessary tools for work
- Working in a team you can always count on — we have on board top-class specialists and experts to learn from

Employment Type

Full-time

Beginning of employment

asap

Job Location

Warsaw, Poland

Working Hours

40

Base Salary

euro USD 57K - 160K *

Date posted

May 16, 2024

- Hackathons and an internal educational platform, MindUp (including training courses on work organization, means of communications, motivation to work and various technologies and subject-matter issues)

Why is it worth working with us?

- Cooperation with industry researchers with a strong publication track record, deploying ML models at an unprecedented scale anywhere else in Poland
- Access to massive one-of-a-kind, text and image e-commerce datasets
- Access to required compute and commercial LLMs from Google and Microsoft
- While working on a problem, you will conduct literature reviews and discuss findings with other team members during internal seminars

Research domains you may explore:

Product Findability:

1. Product retrieval and listing reranking: multi-vector semantic search, robust text/image representation, object detection and segmentation, user personalization
2. Optimization of data-processing and monitoring tools for the online large-scale recommendation system: developing novel methods utilizing ML approach
3. LLM agents for product search: query understanding, raw data annotation, item comparison, automatic knowledge graph generation

Natural language processing:

1. LLM investigations: domain adaptation, cross-lingual transfer, performance optimization, information extraction, synthetic data generation
2. LLM agents for internationalization: MT quality evaluation, context-aware translation, localized recommendation (all for CEE languages)
