Senior Data Scientist in BI Data Engineering team

Description

Data & Analytics is one of the central enablers identified as a priority by Danske Bank's Executive Leadership Team with significant mandate and support.

We invite you to be a part of the collaborative Global Insights department, an integral component of our Group Data and Analytics organization. Renowned as the Business Intelligence powerhouse, our core aspiration and strategic objective is to unlock value from cutting-edge data reporting and visualization solutions on a grand scale.

Our mission is to deliver impactful insights and advanced digital reporting solutions in a timely manner and using analytics to set new standards in the bank for how to use data. We're the backbone for teams and organisational units across the Bank, providing crucial process performance analytics and managerial information.

Our department in the Data & Analytics function works with each of the businesses to enable the adoption of data and utilize analytics to enhance our products and services to our clients.

Join us in our journey to revolutionize the way we understand data. Together, we can take Danske Bank forward.

The workplace is located in new buildings in Vilnius. Danske Bank supports a high degree of workplace flexibility (we currently use a hybrid work model, where we work at least 3 days in the office).

You will:

- Identify opportunities for AI within strategic projects, with a focus on how to optimize our manual services
- Drive prototypes of how solutions can be made to a point where the rest of the organisation can decide how to take them forward
- Work closely with stakeholders to understand their needs and, in many ways work as a front runner and internal consultant
- Collaborate with the Global Insights team, which can help you with data access and insights, and which you can help with your knowledge of how AI/ML can improve the value of what the team does

About you:

Solid and proven experience in:

- Programming knowledge: proficiency in programming languages like Python, R, or Java is crucial
- Statistical Analysis: a good understanding of statistics is essential
- Machine Learning: familiarity with machine learning techniques
- Data Visualization: ability to visualize data in a manner that is understandable to non-technical stakeholders
- Data Wrangling: the ability to map raw data and convert it into another format that allows for more convenient consumption of the data
- Database Systems: some experience with SQL
