Principal Data Engineer-DU-Hybrid

Description
• One of the leading and biggest companies in North-West Europe in the field of consulting and digital transformation.

• Full-service data solutions

Responsibilities
Imagine that you are supplied with huge amounts of data from various sources and that you can make beautiful analytical products on it. As a Data Engineer, you can make a difference by collecting, modeling and structuring complex data sets and by developing data pipelines to perform all of this. In project teams you help design the end-to-end solutions of the data product. You are able to demonstrate your skills in both on-premise and cloud environments and are not afraid of a little coding. You are familiar with terms such as Agile, CI/CD and IaC.

For Our client you work together in a multidisciplinary team with business consultants, professional developers and technical specialists. We like to go the extra mile for a good result and high quality. This results in solutions that make the difference and result in satisfied clients and happy end-users. For this, we are looking for top performing people with a passion for IT and technology with good communicative and analytical skills.

Qualifications
Experience:
• Minimum 5 years of work experience as a Data Engineer.
• Strong in a team with good communication and analytical skills.
• Experience with Cloud platforms (e.g. Azure, AWS, IBM Cloud).
• Experience with the following methods is an advantage: SQL, Python, data pipelines, API access, Agile, Scrum, DevOps, data architecture, data storytelling, Infrastructure-as-Code.
• Analytically strong.
• Good with communication.
• Social and a team player.
• Eager to learn.
• A match with our core values
• Fluent in Dutch and English.
