

Software Architect .net development

Description

As a Software Architect you are responsible for designing the architecture of our applications. You make decisions about the technical design, design architectural concepts, maintain control between modules and systems and develop software that meets the applicable criteria. You involve the development teams in the choices made and ensure that they are followed correctly. You keep a close eye on developments in modern technologies, frameworks and concepts and apply them where possible.

Responsibilities

As a Software Architect you solve problems by designing the architecture of our applications and developing software that meets the applicable criteria.

Qualifications

The ideal candidate has a completed HBO/WO education and at least 8 years of experience with C# .Net software development.

Experience with Azure and Agile and Scrum is a must.

The candidate is skilled in structured and accurate work and has a strong communicative personality, with fluency in Dutch both written and spoken.

A proactive and driven specialist who wants to make a difference.

Experience in the automotive industry is an advantage.
